**Registration Closes November 5, 2024**

FREE for Contractors and Staff

*These are don't miss opportunities for  
your field crews and installers.*

Lunch Provided

**Three Unique Presentations.  
Plus a Vendor Marketplace.  
One Day.**

---

## SESSION 1 - MULE MEETS RAIL - by Construction Robotics & EZ Scaffold

Developed from customer feedback with the needs of the mason in mind, the MULE Rail System is an engineering collaboration between Construction Robotics and EZ Scaffold. This innovation allows a contractor using MULE (Material Unit Lift Enhancer) to quickly and safely move each MULE down a rail system to work another wall section, effectively doubling the amount of wall covered by a single MULE.

The versatile design allows the MULE Rail to be mounted anywhere on the platform, from side to side and front to back, and because the rail system mounts above the scaffold deck, it does not impede worker or material access. It can be used on any EZ Scaffold; Singles, Compacts, Twins and Crank Up. **This is an interactive session** providing participants a unique opportunity to get hands-on with these innovative solutions for the masonry industry.

### Your presenters:

Clint Bridges  
EZ Scaffold

Matt Oklevitch  
Construction Robotics

## SESSION 2 - EVERYTHING YOU NEED TO KNOW FOR YOUR NEXT ADHERED VENEER JOB - by OMEGA Products International-MAVS Division

This topic covers the three pieces to the puzzle for a successful install:

- Identifying adhered veneer types.
- Identifying properly prepared substrate.

C. Timing the proper poly modified bonding mortar after A and B have been addressed.

Plus updated code changes as of January 1st 2024 from the TMS 402/602 and certifications needed from the [CMHA](#) (Concrete Masonry & Hardscapes Association) for any manufacture stone veneer installation.

## Your presenter:

**TJ Huber**

Adhered Veneer Specialist  
Product Support Representative  
Omega Products International-MAVS Division

## SESSION 3 - BUCKING TRENDS IN MASONRY SHORING - by QUICK HEADERS

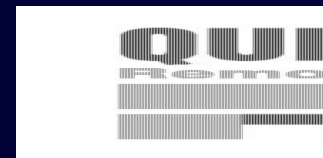

Quick Headers are a temporary, removable beam support used in masonry construction when setting concrete "CMU" blocks over any size opening. Ranging in sizes from 2' to 16' in length, in 1' increments, Quick Headers require only one post for every 6' of length. The Quick Connect effortlessly links Quick Headers together to cross over virtually any length. Post Shores reach from 3'6" to 36' in height. No more wood bucks! Quick Headers are reusable and now available for rent from Quick Headers NorCal, saving you over 50% on your shoring, increasing your safety standards and efficiency 100%!
